## THE THREAT IS REAL – LET US HELP

We all know how important spring cleaning and disinfection is in the workplace, but with the spread of Coronavirus and influenza right now, disinfecting your workplace is one of the best ways to halt the spread of these viruses.

CFS uses a product called VitalOxide, which has already demonstrated effectiveness against viruses similar to 2019-nCoV on hard, non-porous surfaces.

- Vital Oxide® disinfectant contains active ingredients that are EPA-registered to kill nCoV organisms.
- nCoV contamination requires thorough cleaning and disinfection of surfaces and materials within the affected area.
- We pay special attention to common use areas where nCoV can be easily spread through direct contact with others and cross contamination may occur.
- CFS applies VitalOxide with an electrostatic fogger to ensure all viruses are wiped out.
- Did you know the annual flu season costs businesses \$111 million per year? And that's just the flu, not taking into account other viruses and bacteria.

**Vital Oxide kills the Coronavirus on contact, and other viruses like Ebola and MRSA, as well as 99.999% of bacteria and is effective against mold, mildew and bad odors.** It is an EPA-registered, hospital grade disinfectant. Applied with an atomizer fog, it sanitizes and disinfects every square inch of an area.

**Don't wait. Protect your customers and employees now.**
